FALCON
Solution Ltd

Green & Sustainable Solution for Industrial,
Commercial & Residential Flooring System

falconsolution18@gmail.com

www.falconsolutionbd.com

Benefits :

- Solvent Free, Hygienic & Food Grade
- High Temperature Resistant
- Long Lasting & Economical
- Slip Resistant & Easy to Clean
- Antistatic & Anti Corrosive
- Very High Chemical Resistance
- High Abrasion Resistance
- Low odour during application

Uses Area :

- Pharmaceuticals & Hospitals
- Food Processing & Beverage
- Any kinds of Heavy Load area
- Textile and Garments
- Any Kinds of Warehouse
- Spinning Mills

Polyurethane Industrial Floor

PU products have been designed for use in environments where high resistance to abrasion impact and chemical resistance is required. They are also suitable for use in wet process conditions. In addition polyurethane can be used in areas subjected to thermal shock. Typical areas of use include food processing areas, drink and beverage production areas, dairy processing and pharmaceutical, Textile & Garments. They provide a quality, cost effective alternative to tiling systems.

Falcon Solution have High skill and trained application team and Civil engineers for projects super-visor. We are working with PU Flooring from 2014 to till, almost maximum multinational and top national company already our regular client. We are regular trained our application team for excellence. Our product average thickness 3-6 mm and various for customized floors as per client requirement.

PU Flooring for Car Paking

PU car park protection systems have been designed to meet contemporary requirements for upmarket car park environments, helping to enhance visual appearance, reduce noise from tyre squeal and prevent water ingress into the concrete structure. In addition, PU has a highly accredited fire rating and is available in a wide-range of attractive colours and finishes - with the option to create bright demarcation lines and signage, which help to regulate traffic movement and leave a welcoming impression on vehicle/parking users.

Epoxy Flooring System

Epoxy is a term that's come to represent a class of materials and the act of using those materials. Epoxy "systems" are based on a combination of resins and hardeners. When mixed together, the resin and hardener chemically react to form a rigid plastic material. The final material is strong, durable, resistant, and bonds extremely well to most base layers. Epoxy floors are so strong that they're often used in heavy traffic areas such as industrial environments, hospitals, or sports facilities.

Benefits:

- Low odour during application
- Smooth & Anti-Slip Surface
- Seamless & High Gloss
- Light Chemicals Resistant
- Hard wearing & Long lasting
- Hygienic & Imperable
- Non-Tainting
- Durable, Tough & Impervious
- Attractive Orange Finish
- Increased Abrasion resistant

Uses Area :

- Pharmaceuticals & Hospitals
- Light Load Areas
- Residential Areas
- Commercial Areas
- Schools & Offices
- Laboratories
- Dry Process Area
- Packing/ Botling Area
- Service Floors
- Storage Area

Epoxy Wall Coating

Epoxy coating for walls, is a two component, 100% solids epoxy Hi-Build epoxy wall coating used for high indoor traffic areas where abrasion resistance is required; for protection against mild corrosion; and as a decorative waterproof coating for walls, tanks, etc.

Falcon Epoxy is a high performance, colorfast wall system that provides an attractive, yet tough, abrasion and chemical resistant surface. Applied in multiple layers, this VOC compliant, low odor system results in a jointless “tile-like” finish.

Benefits:

- Moisture Insensitive
- Ceramic like finish
- Thicker Bodied Epoxy
- Solvent Free
- Waterproofing
- Extremely Durable
- Chemical Resistant

Epoxy Garage Floor coating

We will start by ending some confusion about epoxy right now. Paint for garage floors is a latex acrylic product. Some paints will have a small percentage of epoxy added to the mix to make it more durable than standard paint, but it is still paint. These are known as epoxy paints or 1-part epoxy paint. Epoxy is an actual thermosetting resin that is applied as a coating. It is formed when you mix one part epoxide resin with one part polyamine hardener. The hardener acts as a catalyst and is what gives epoxy its strength.

Commercial & Residential Decorative Flooring

Decorative Concrete Floors has been extremely innovative when it comes to decorative concrete and flooring solutions. We are one of the best in epoxy flooring, epoxy resin flooring or decorative epoxy floors. The combination of our experience and expertise helps us to stand out from our competitors when it comes to decorative epoxy floors for residential, commercial or industrial purpose. We have handled projects ranging from small-scale to large commercial projects with specialization teams for concrete polishing, grinding, cleaning, coating and sealing.

Product Benefits:

Attractive:

Decorative Finish to transform dull commercial environments.

Resistant:

Excellent resistance to chemicals, and general wear and tear.

Solvent Free & Low Odour:

Improved air quality during installation and beyond.

Reduces Noise:

Minimises unwanted noise from footsteps in busy commercial spaces.

UV Stable:

100% UV light stable, Prevents from yellowing effect.

Fair Face Plaster

Modern architecture is unimaginable without fair-faced concrete. For decades priority was given to the unique load-bearing properties and unrivaled cost/performance ratio as a structural building material. It is only in recent years that the marvelous design versatility and the creation of many different finishes have also come to the fore.

Benefits:

- Improves adhesion, working time and durability of cement and gypsum based plaster to the surface such as brute concrete, wall, ceilings
- Water based, odorless and safely used in interiors
- Prevents quick water loss of concrete which applied on highly absorbent surfaces

Uses Area:

- Interior areas for horizontal, vertical and ceiling applications.
- Used as primer on ceiling plasters
- Apply to brute concrete surface before cement and gypsum based plaster applications
- Used for improving adhesion, working time and workability to plasters

Waterproofing:

Waterproofing is the process of making an object or structure waterproof or water-resistant so that it remains relatively unaffected by water or resisting the ingress of water under specified conditions. Such items may be used in wet environments or under water to specified depths.

Falcon solution deal with waterproofing last 3 years .

Benefits

- ▶ Protection of your surface/ home from the inside out,
- ▶ Preservation of your home's condition and value,
- ▶ Continued comfort and safety for you and your family,
- ▶ Prevention of possible water damage.

There are many below-grade waterproofing products on the market. Most manufacturers require you to become a certified applicator before they will guarantee an installation. If you're just going to do occasional waterproofing, I suggest you choose one product, get certified by the manufacturer, and learn all about that one product. Eventually you'll get good at applying it and be able to work quickly and safely. Different products can have very different characteristics, so only specialty waterproofing contractors should try working with multiple products.

Types

- ▶ Cementitious Waterproofing
- ▶ Liquid Membranes
- ▶ Sheet Membranes
- ▶ Concrete Waterproofing
- ▶ Bentonite Waterproofing

Floor Hardener

Offering floor hardener such as concrete floor hardener, metallic floor hardener, non metallic floor hardener, liquid floor hardener, heavy duty metallic floor hardener, glossy liquid hardener, carborandum based non-metallic floor hardener and industrial floor hardener. LIQUI-HARD concrete densifier and chemical hardener compound is a proprietary, water-based, ready-to-use, clear silicate liquid, formulated with chemically reactive raw materials to harden and dustproof concrete. ... This process produces a substantially denser concrete surface with enhanced durability.

Falcon solution provide all range of modern floor hardener as per customer needed. But we prefer metallic Floor Harder floor sustainable solution. We have our own machine for apply and its help client for thier customized concrete application as per thier in time with proper process. Also we have 10 experienced applicator who apply floor hardener last 15 years here in Bangladesh.

Benefits:

- Increases surface density and durability
- Non metallic - does not rust or stain
- Provides a hard, abrasion resistant surface
- Naturally slip resistant
- Forms monolithic bond with base concrete
- Easy and economical to apply
- Minimizes maintenance costs and labor

Uses Area:

- Interior horizontal concrete surfaces
- Freshly poured or older, cured concrete
- Industrial, Commercial or warehouse floor
- Food preparation, storage and distribution
- Convention centers, Sports facilities
- Freezers, cold rooms, walk-in chillers
- Schools, hospitals, retail outlets
- And others area where needed.

Polyurethane Sports Flooring

Polyurethane sports floorings are well known for their top quality for all kind of different sports in all possible climates all over the globe. The excellent slip and wear resistance make the PU-Sport systems the right choice for many athletes for professional sports as well as for recreational sports. EPI polyurethane sports floorings are well known for their top quality for all kind of different sports in all possible climates all over the globe. The excellent slip and wear resistance make the PU-Sport systems the right choice for many athletes for professional sports as well as for recreational sports

Polished Concrete

Floor Polishing is a sophisticated method of the present are. Through the method the normal stone floor is transformed into a mirror-like floor with the help of a high technology machine, it is known as floor finishing. This is mainly discovered by America, Japan, Europe, Germany and China Technologies. The word conquers now in Bangladesh. We are the first to bring this technology by Bangladesh.

It is a widely known fact that floor polishing is an essential part of any property's overall image. A well polished floor sends a positive message to all who visit, whilst making a vital contribution to the overall decor and interior design of a property.

Construction Chemicals

Admixture

Set retarding concrete admixtures are used to delay the chemical reaction that takes place when the concrete starts the setting process. These types of concrete admixtures are commonly used to reduce the effect of high temperatures that could produce a faster initial setting of concrete. Set retarding admixtures are used in concrete pavement construction, allowing more time for finishing concrete pavements, reducing additional costs to place a new concrete batch plant on the job site and helps eliminate cold joints in concrete. Retarders can also be used to resist cracking due to form deflection that can occur when horizontal slabs are placed in sections. Most retarders also function as water reducers and may entrain some air in concrete.

Epoxy Crack Injection

Epoxy crack injection (also referred to as epoxy injection) is an extremely effective and reliable concrete crack repair method, used exclusively for the repair of poured concrete foundation cracks, for the structural repair of same, to fix basement leaks, and to prevent poured concrete foundation cracks from leaking in the future. When used under the right conditions and when done properly by a trained injection technician, an epoxy concrete crack repair does not fail.

Joint Sealant

Our extensive range of joint sealants, provide to the highest quality standards backed our application, have long been respected by clients, designers and contractors providing long term durability to building structures around the world, including many iconic buildings such as the Grand Mosque in Malaysia. Falcon worked alongside the project team to provide a bespoke solution for this project which included a special colour for the joints to the highly expensive detailed marble panels.
